Social Computing Capstone

Day 3: Team formation and ideation

CSE 481p | Winter 2022

Amy X. Zhang

Assistant Professor | University of Washington, Allen School of Computer Science & Engineering

Schedule for today's class

- Share out from A2 (20 min)

- Group formation and group discussion time:

  - Collaboratively edit the FigJam with ideas (5 min)

  - Get into topical groups in gather.town to discuss further (20 min)

  - Find a group of 3-4 and start discussing projects (30 min)

- There's not going to be time to discuss the topic on the calendar for today (Why do people want to use social computing systems?) - I will now talk about it on Thursday!

Share out from A2 (tell us about an online social community you are a part of!)

FigJam time

- We put your project ideas (tinyurl.com/socapideas) as post-it notes in FigJam (https://tinyurl.com/socapfigjam) and started to cluster them. Please take a look over the clusters and move things around/make new clusters, add new ideas as post-its, and add your name as stickers to the topics you're interested in (can be multiple)

- We'll do this for ~5-10 minutes.

gather.town time

- https://tinyurl.com/socapgather Password: uwcse

- We've create tables in gather.town for each of the topics. Feel free to "walk around" the different tables and talk to each other about project ideas within the topics. Feel free to continue using the FigJam to record ideas and add stickies of any kind.

- If you feel like you've found a group of 3-4 that you want to work with, come back to this Zoom, where we'll put you into a breakout room.

Zoom breakout group time

- In your breakout group, go around and discuss your answer to the following questions:

  - What do you envision your role to be in your team?

  - What will you contribute to the team?

  - Personal learning goals: How do you want to grow as part of this project? What are some specific skills (interpersonal or applied skills) that you would like to learn? How do you think your team members can help you learn these skills?

- Also come up with a group name!

- When you're done, fill out the following survey as a team: https://tinyurl.com/socapgroups

- If there's leftover time, start talking about a **project direction** and you can take an early look at G1 (User Research Report), due next week. Ping me to talk to you about your project - I may have some pointers.
